\*Not To Scale\*

20 ft (Outside Brickwork)

\*Not To Scale\*

Concrete can be 2 inches bigger  
 all around but is not essential.  
 (It makes getting the brick  
 course square easier if the  
 concrete is a bit out)

20 inches

Please make sure the outside brick measurements do not exceed 20ft x 20ft, The bricks are the ones with 3 large round holes in and should be cemented to the base widest side down.

Please note if your driveway is on an upward angle this may prohibit the doors from opening.  
 The concrete may need to ramp up to the doors depending on how high the finished concrete level is and what you intend to use the building for.
